

ABSTRACT OF THE DISCLOSURE

The present invention relates to a hub structure having a charging function. The structure is a combined structure formed by integrating a conventional
5 charging holder/device and a hub so as to provide the direct current to a wireless mouse, wireless indexer, wireless keyboard, or wireless device of the general computer. This will avoid the trouble of installing or replacing the battery of the wireless peripheral device for the computer. Besides, each of the wireless keyboard, the wireless mouse and the wireless device has to be
10 provided with a receiving device to be connected to the computer. Therefore, the present invention is used for being connected to the wireless keyboard and the wireless mouse so as to reduce the cost, promoting the efficiency and provide the convenience to the consumer.
